

DESIGN THINKING

ITLS 5275/6870/7870 | Fall 2017 | Online

No prerequisite required. Undergrads welcome with instructor signature.

In this online course, we will explore design thinking methods and tools to support these practices. We will discuss issues around human-centered design, user experience, and user interface design such as rapid prototyping, wire-framing, user testing, and collaborative design methodologies. We will cover topics that are relevant to myriad design fields including instructional technology, interaction design, and software development.
